PHC 6764: Global Public Health and Development I

Sarah McKune, PhD
Monday, 9:35am-12:35pm
Room # TBA
3 Credits

This health and development course was created initially for the Master's in Development Practice (MDP) program. However it is appropriate for graduate students interested in an introduction to the interaction between environmental, economic, and social processes with global public health threats.

This course will cover fundamental public health and anthropologic principles, methods, and study designs. Case studies will be used to demonstrate how development practitioners can incorporate the use of these methods to investigate patterns of disease, patterns of culture, risk factors, broad causes, and the need for integrated interventions to reduce risk of disease and death. The case studies will also illustrate major global health challenges, such as malaria, HIV/AIDS, and maternal and child morbidity and mortality.

Please contact the EGH Academic Program Specialist, Victoria Houghton, to register.
